Porno filter
TVSYD, Denmark

Presenter: As the internet and computers are getting more and more common, new habits are also turning up. Porno on the internet is now the new hit in Denmark – also at schools. And for some pupils it has become such a necessary thing, that one school has been forced to put an end on it

Porno filter

TVSYD, Denmark

0'00

Now it has come to an end with videogames and surfing on porno sites for the students here on Horsens Commercial School. Now there has been placed an internet filter on the servers and by that made it possible to make porno a subject to censorship

0'12

"We want the computers to work as good as possible for the purpose of the education, and if they are spoiled by the fact, that the students are using them for purposes, they are not allowed to, we have to censor it"

0'22

The students had already agreed, that they would not use the computers on the school for games and porno. But the students did not keep their promises, and therefore an internet filter was installed

0'33

"If we go into playboy.com, it's such a typical example, you will get the repudiation site of Horsens Commercial School "

0'42

And the censor was well received by the students, though they were the reason for it

0'50

"Of course we are supposed to use the computers for our work. It's irritating, that the computers are occupied by people who is playing games or is looking at porno, if you have to use the computers for your work"

1'00

"I think, it's okay with censor. We did promise, that we wouldn't use the computers for porno and things like that. So why not make the porno a subject to censorship?"

1'07

"You are grownup people. Why are you not able to handle this? You're right, we should be able to do that, but unfortunately there will always be some, who will break the rules"

1'15

The company IP Service has developed the censor filter. Here they have no scruples about developing a tool that can stop users in seeing what they want on the internet

1'25

"Of course you always have the discussion about moral. On the school it might be a questions whether being guardian of moral or teaching the students how to get a moral themselves. But I don't think, that we are supposed to be guardian of moral. We only deliver the product for the purpose"

1'44

And Horsens Commercial School cannot see the problem of making the computers subjects of censorship

1'48

"You will always be able to use the computers for serious things. So if they want to use the computers for things, they come to school for, there are no problems. And if we think, we have got too much censor, we will always be able to remove the filter again"
